2.

Pronouns and common verbs such as "could" and "would" appear a lot of more often than nouns such as "decentralizing" and "sockdologizing" that are not often used in real life. We may suggest that words commonly used in real life appear more often in the text file than those we do not use quite often, and exceptions such as "wanna"(wc:3) and "gonna"(wc:16) commonly used in conversations appear not as often as we expect. Terms in a specific field are often used under some context and that is why words like "sockdologizing" and "decentralizing" rarely appear in the text file. Pronouns and common verbs can be used under any context so they appear quite often in the text. As far as those exceptions, we tend to written papers in a formal way that is different from the way we talk to our friends, and that is why "wanna" and "gonna" appear not as much as much as the others commonly used in real life.
